## Insurance waiver for HPV(human papilloma virus)

HPV is a very common virus that most sexually active men and women are exposed to at some point in their lives. HPV infection can cause cervical changes that may lead to cervical cancer.

According to the guidelines from ACOG(American College of Obstetrics and Gynecology) and ASCCP (American Society of Colposcopy and Cervical Pathology) we are recommending all women aged 30 and over to get this test done, for the following reasons:

Papsmear looks for cervical abnormal cells.
HPV checks for actual HPV infection.

These two test combined will give higher degree of certainty that you do not have cervical disease.

Please be aware that you will be responsible for the bill if your insurance company does not pay for the test.

Patient's Name_____ Date_____

**YES**, I want test done_____
(Signature)

**NO**, I do not want HPV test done_____
(Signature)
